

# What's New in SurfaceWorks 9.0

---

The new functionality added in the release of SurfaceWorks 9.0 is summarized as follows:

## Entities Manager Enhancements

---

Beginning with SurfaceWorks v9.0, the Entities Manager has been enhanced in several ways. Now all selected entities are highlighted with their names against a blue background, not just the last selected entity. This makes seeing what is selected more apparent. The Entities Manager also allows shift-click selecting within a branch making multiple selections within a branch much simpler.

## Model Subview

---

The Model Subview is a new view within SurfaceWorks. It makes it possible to isolate certain entities in a graphic view so they can be edited much easier apart from the clutter of entities that often occurs in the main model view.
